ACKNOWLEDGMENTS

The National Commission on Nurse Anesthesia Education gratefully acknowledges the efforts of the many individuals and associations for their assistance in the Commission's work. These include:

Those individuals and groups that gave of their time and themselves to offer verbal and written comments regarding the needs of nurse anesthesia education.

Program directors, faculty and students of nurse anesthesia educational programs who took the time to complete the various questionnaires and surveys needed by the Commission.

Those individuals who submitted manuscripts as background information for the Commission.

The AANA President, Richard G. Ouellette, CRNA, MEd, who conceived the project, and the AANA Board of Directors, who approved it and the funding to make it happen.

The members of the AANA whose history and educational experiences have contributed to the Commissioners' understanding of the environment for nurse anesthesia education.

The AANA staff, which nurtured us and put it all together.

Do You Have
STAR QUALITY?

If so, become part of our
South Florida Star System!

HERE ARE SOME OF THE GLITTERING
ADVANTAGES YOU CAN EXPECT:

• Up to a $5,000 sign-on bonus!
• A very competitive salary scale,
  which we recently increased by
  20%!
• Weekend differential!
• Flexible scheduling provides a
  week off in the rotation with 8 and
  12 hour shifts!
• Comprehensive relocation
  package!
• Life/Health/Dental/Vision
  insurance!
• Optional pay in lieu of benefits!
• Paid leave!
• Pension/TDA/Credit Union!
• No City/State Income Taxes!

You can enjoy all of these features and more with North Broward Hospital District, one of
the country's most successful not-for-profit, tax-assisted multi-hospital systems, located in
fabulous Ft. Lauderdale, Florida.

Our largest facility, Broward General Medical Center with 744 beds and a 50+-year history
of providing acute care services, currently has opportunities for:

DIRECTOR OF ANESTHESIA & STAFF CRNA's

Qualifications include an active Florida ARNP, AANA certification, AANA membership
and three years of experience in general surgery and obstetrics. You must be skilled
enough to assume full patient care responsibility and have the ability to practice under
direct and indirect medical supervision. The Director position also requires strong
leadership skills and directly related background in a similar hospital setting.

Your expertise will be put to good use on a variety of cases in our 13-room OR suite,
which averages 40 cases per day in Neuro, Trauma, Ortho, GU, Eye, ENT, Open Heart,
Gynecology and Pediatrics. Plus, we average 6,000 deliveries a year and handle house
emergencies including code coverage. You won't find a more challenging or stimulating
professional environment!

To find out more, please call
1-800-212-4337.

Or write to: North Broward Hospital
District, Victoria Wadman, Sr. Professional
Recruiter, 201 E. Sample Rd., Pompano
Beach, FL 33064. An equal opportunity
employer, M/F/H/V.

Carolina Anesthesiology, P.A.
P.O. Box 2324
High Point, NC 27261

Kaiser Permanente, the nation’s most comprehensive private sector prepaid health care delivery system, has excellent opportunities available at our Sacramento Medical Center for experienced and board eligible Certified Registered Nurse Anesthetists. Apply your specialized skills in an environment that promotes your professional development and career satisfaction. You will be an integral member of the anesthesia care team, working closely with colleagues to develop, deliver and evaluate each patient care plan. CRNAs can participate as members of operating teams in neurosurgery, vascular surgery, obstetrical surgery (including high-risk) and ambulatory day surgery in addition to general surgery. On-call and full-time schedules are available.

We offer excellent benefits, competitive salaries and the cultural and recreational advantages of Sacramento and the surrounding areas. For more information, contact Roger Bonn, CRNA, Anes. Supervisor, (916) 973-7708, or send resume to: Personnel Dept., 2025 Morse Ave., Sacramento, CA 95825. We are an EEO/AA employer. Minorities, women, handicapped, and veterans are encouraged to apply.

Richland Memorial Hospital

NURSE ANESTHETISTS

Immediate openings for Staff CRNAs. Richland Memorial Hospital is a 601-bed teaching hospital with both a School of Nurse Anesthesia and a residency program. MDA-CRNA ratio of 1:2; all types of anesthesia performed, including neuro, neonatology and open heart.

Our newly expanded operating facility offers the CRNA an exciting challenge and the opportunity for professional growth in a dynamic, state-of-the-art setting.

Richland offers an excellent benefits package including insurance, child care center, tuition reimbursement, flexible scheduling, excellent salary and much more!

For more information call Nurse Recruitment, COLLECT (803) 765-6970 or send a confidential resume to:

RICHLAND MEMORIAL HOSPITAL
Five Richland Medical Park
Columbia, SC 29203

Equal Opportunity Employer

CRNA’s — North Carolina’s only women’s hospital will open in November 1990 and is expanding its Anesthesia Department.

• 115 beds with surgical, maternity and neonatal units
• 6 Operating Rooms, 3700 procedures/yr., 3900 deliveries/yr.
• $2500 Sign-on bonus
• Very positive practice environment with the opportunity for expanded privileges
• Relocation assistance
• Very competitive salaries, benefits and merit pay program
• 10 CRNA’s, 4 MDA’s
• Surgical focus: gyn, urology, general surgery, ENT, oral & plastic
• Hospital will pay malpractice insurance and AANA dues after the first year.

We are located in the desirable Piedmont area of North Carolina with the mountains and beach just a few hours away. For more information, please contact:

Glendale, CA 91203
Equal Opportunity Employer

Money isn't everything.
Yes it is. No it isn't.
Yes it is.

Because we recognize the immense value of our professional CRNAs, we offer one of the highest base salaries in the nation -- in excess of $75,000. But with everything else we offer, money just pales by comparison.
Here, a team approach encourages professional autonomy in consultation with anesthesiologists. And you can choose from the challenge of open-heart surgery, trauma and transplants, to opportunities in regional anesthesia, invasive monitoring techniques and pain management.
We offer excellent educational opportunities including an on-site Master's program, 5.5 weeks of paid time off, incentive bonuses for new graduates to $4,000 and relocation assistance from outside southeast Michigan to our world-class 937-bed hospital. Now, with all that, is a $75,000 a year base salary really everything? We don't think so. But you can spend the rest of your career deciding.
Send your resume to: Wanda Scipio, Employment Manager, Henry Ford Hospital, Employment Division, 2921 West Grand Boulevard, Detroit, MI 48202. Or call the Anesthesia Department at (313) 876-2545. An Equal Opportunity/Affirmative Action Employer.

We Believe that Caring is an Art.
Certified Registered Nurse Anesthetists
The University of Texas M.D. Anderson Cancer Center, one of the world's leading comprehensive cancer institutions, is seeking full time CRNAs. Graduation from an approved School of Nursing, accredited School of Nurse Anesthesia, current RN license and certification or eligible for certification required. In addition to the unlimited professional challenges and rewards at M.D. Anderson, we can offer you:

COMPETITIVE SALARIES plus...

• Comprehensive benefits package
• Low incidence of call and take call from home
• State-provided professional liability coverage
• Participatory retirement plan
• Reimbursement for interviewing expenses
• State-of-the-art anesthesia and monitoring equipment

• Active continuing education programs
• Conference travel allowance
• Interest-free relocation loan
• Professional membership dues reimbursement
• Special recreational features such as swimming pool, jogging track and tennis courts

Interested professional CRNAs are encouraged to contact Dr. Hollis E. Bivens, Chairman, Department of Anesthesiology, MDA 42, 1515 Holcombe Blvd., Houston, Texas 77030, (713) 792-6911, or Maria Farah, Division of Human Resources, (713) 792-8004.

VERSED® (brand of midazolam HCl/Roche) INJECTION

Before prescribing, please consult complete product information, a summary of which follows:

Intravenous VERSED has been associated with respiratory depression and respiratory arrest, especially when used for conscious sedation. In some cases, where this was not recognized promptly and treated effectively, death or hypoxic encephalopathy has resulted. Intravenous VERSED may also be used only in hospital or ambulatory care settings, including physicians' offices, that provide for continuous monitoring of respiratory and cardiac function. Immediate availability of resuscitative drugs and equipment and personnel trained in their use should be assured. (See WARNINGS.)

The initial intravenous dose for conscious sedation may be as little as 1 mg, but shall not exceed 6 mg, normal healthy patients in whom the effects of the drug, such as drowsiness, have subsided or until the day after anesthesia, premedicated or not. Patients with chronic obstructive pulmonary disease are unusually sensitive to the respiratory depressant effect of VERSED. Patients with chronic renal failure and patients with congestive heart failure eliminate midazolam more slowly than normal. Because frequencies of adverse effects of this drug have been reported, however, the possibility of cerebral hypoxia or true paradoxical reactions should be considered. Should these reactions occur, response to each dose of VERSED and all other drugs should be evaluated before proceeding. Concomitant use of barbiturates, alcohol or other CNS depressants may increase the risk of underventilation or apnea and may contribute to profound and/or prolonged drug effect. Narcotic premedication also depresses the ventilatory response to carbon dioxide stimulation.

Higher risk surgical, elderly or debilitated patients require lower doses for induction of anesthesia. Premedication, if used during pregnancy, suprase the possible risk to the fetus. VERSED has been shown to be safe in the human dose, did not show evidence of teratogenicity in the rat. A reproduction study in rats did not show any impairment of fertility at up to ten times the human IV dose.

Drug/laboratory test interactions: Midazolam maleate has been administered to mice and rats for two years. At the highest dose (80 mg/kg/day) female mice had a marked increase in incidence of hepatic tumors and male rats had a small but significant increase in benign thyroid follicular cell tumors. These tumors were found after chronic use, whereas human use would normally be of single or several doses. Midazolam did not have mutagenic activity in that test, that was conducted. A reproduction study in rats did not show any impairment of fertility at up to ten times the human IV dose.

Adverse reactions: See WARNINGS concerning serious cardiorespiratory adverse events and possible paradoxical reactions. Fluctuations in vital signs following parenteral administration were the most frequently observed adverse events and included decreased tidal volume and/or tidal volume and/or respiratory rate decrease (23.3% of patients following IV and 10.8% of patients following IM administration) and apnea (15.4% of patients following IV administration), as well as a variety of cardiovascular effects (< 1%) mainly following IV administration. Some patients have complained of withdrawal effects following discontinuation of repetitive doses for induction of anesthesia. However, the possibility of cerebral hypoxia or true paradoxical reactions should be considered. Should these reactions occur, response to each dose of VERSED and all other drugs should be evaluated before proceeding. Consistent use of barbiturates, alcohol or other CNS depressants may increase the risk of underventilation or apnea and may contribute to profound and/or prolonged drug effect. Narcotic premedication also depresses the ventilatory response to carbon dioxide stimulation.

Precautions: General: Decrease intravenous doses in elderly and debilitated patients. These patients will also probably take longer to recover completely after VERSED for induction of anesthesia. VERSED does not protect against increased intracranial pressure or against the heart rate rise and/or blood pressure rise associated with endotracheal intubation under light general anesthesia information for patients: Communicate the following information and instructions to the patient and/or their family: The drug should be prepared and administered by physicians or qualified medical personnel experienced in the use of intravenous sedative agents, preferably trained in the use of intravenous sedation, and in the use of resuscitative drugs and equipment. Lives may be assured. (See WARNINGS.)

Dosage and administration: See WARNINGS concerning serious cardiorespiratory adverse events and possible paradoxical reactions. Fluctuations in vital signs following parenteral administration of VERSED have been reported. However, when used during pregnancy, superse the possible risk to the fetus. VERSED has been shown to be safe in the human dose, did not show evidence of teratogenicity in the rat. A reproduction study in rats did not show any impairment of fertility at up to ten times the human IV dose.

Overdosage: Manifestations would resemble those observed with other benzodiazepines (e.g., sedation, somnolence, confusion, impaired coordination, diminished reflexes, coma, untoward effects on vital signs) No specific organ toxicity was expected.

VERSED® (brand of midazolam HCl/Roche) INJECTION

A moderate reduction in induction dosage requirements of thiopental (about 15%) has been noted following use of IM VERSED for premedication. IV administration of VERSED decreases the minimum alveolar concentration (MAC) of halothane required for general anesthesia. This decrease correlates with the dose of VERSED administered. Although the possibility of minor interactive effects has not been fully studied, VERSED and succinylcholine have been used together in patients without noting clinically significant changes in dosage, onset or duration. VERSED does not protect against the characteristic circulatory changes noted after administration of succinylcholine or pancuronium, or against the inevitable arterial hypertension noted following administration of succinylcholine. VERSED does not cause a clinically significant change in dosage, onset or duration of a single inebriating dose of succinylcholine.

No significant adverse interactions have been studied. The following drugs have been used for sedation and surgery (including atropine, scopolamine, glycopyrrolate, diazepam, hydroxyzine, d-lobocurarine, succinylcholine and nondepolarizing muscle relaxants) or topical local anesthetics (including lidocaine, dyclone HCl and Cetacaine) have been observed. Drug/laboratory test interactions: Midazolam has not been shown to interfere with clinical laboratory test results. Carbogenesis, mutagenesis, impairment of fertility: Midazolam maleate was administered to mice and rats for two years. At the highest dose (80 mg/kg/day) female mice had a marked increase in incidence of hepatic tumors and male rats had a small but significant increase in benign thyroid follicular cell tumors. These tumors were found after chronic use, whereas human use would normally be of single or several doses. Midazolam did not have mutagenic activity in that test, that was conducted. A reproduction study in rats did not show any impairment of fertility at up to ten times the human IV dose.
