

## **Certified Registered Nurse Anesthetists, Advanced Practice Registered Nurses**

*CRNAs should not be referred to as “mid-level practitioners,” “nonphysicians,” “physician extenders,” “dependent practitioners,” or “allied health practitioners”*

### *Position Statement*

#### **Introduction**

The practice of anesthesia has been a recognized nursing specialty for more than 150 years.<sup>1</sup> Historically, in some settings, publications, policies and law, the Certified Registered Nurse Anesthetist (CRNA) has been referred to as a “midlevel provider” or “physician extender.” These and other terms are not representative of nurse anesthesia practice.

The American Association of Nurse Anesthetists (AANA) presents this statement in an effort to clarify for the public the many ways someone may refer to a CRNA. Each healthcare professional has a unique title that is representative of his or her education, licensure, certification, and expertise.

#### **Position**

AANA recognizes the following titles to identify nurse anesthetists: “Certified Registered Nurse Anesthetist,” “CRNA,” and “nurse anesthetist.”

The AANA acknowledges additional descriptors for nurse anesthetists which could include, but are not limited to, the following; “Advanced Practice Registered Nurse (APRN),” “Licensed Nurse Practitioner (LNP),” “Licensed Independent Practitioner (LIP),” “Advanced Practice Provider (APP),” “advanced practice professional” or “nurse anesthesiologist.”

***It remains the responsibility of each individual CRNA to remain aware of and comply with the legal requirements of any state or facility in which they practice. The use of some titles may also be protected under state law.***

The AANA opposes descriptors such as “mid-level practitioner,” “nonphysician,” “physician extender,” “dependent practitioner,” and “allied health practitioner” to refer to CRNAs either individually or as part of a group. We urge use of the titles “Certified Registered Nurse Anesthetist,” “CRNA,” or “nurse anesthetist” by healthcare policymakers, insurers, organizations, employers, healthcare professionals, and others for accurate and clear identification of the professional title.

Descriptors such as “mid-level practitioner” are outdated and anachronistic in the current healthcare system. Use of these descriptors can cause confusion for patients and others.<sup>2</sup> The National Academies of Sciences, Engineering, and Medicine (formerly the Institute of Medicine)<sup>3</sup> and the Federal Trade Commission have repeatedly called for APRNs, including CRNAs, to practice to the full extent of their education, training, and certification in the interest of patient access to safe, high-quality care and competition in the marketplace to help promote innovation and control healthcare price growth.<sup>4</sup>

## CRNA Practice

The AANA's [Scope of Nurse Anesthesia Practice](#) reflects that CRNAs are licensed, independent practitioners who provide comprehensive anesthesia services. CRNAs are not extenders of physicians, nor are they dependent on physicians to provide anesthesia services. CRNAs practice both autonomously and in collaboration with other healthcare professionals on the interprofessional team to deliver high-quality, holistic, patient-centered, evidence-based anesthesia and pain care services. Nurse anesthetists care for patients of all acuity levels across the lifespan of the patient in a variety of settings for procedures including, but not limited to, surgical, obstetrical, diagnostic, therapeutic, and pain management. CRNAs serve in leadership roles in healthcare delivery organizations and academic institutions and receive direct reimbursement for anesthesia care from Medicare and major commercial plans.

## Background

Descriptors such as “mid-level provider,” “nonphysician,” and “physician extender” were created by physicians, physician groups, and physician-led organizations and corporations.<sup>5</sup> “Mid-level” implies that CRNAs provide only average care, which numerous studies refute (see [CRNAs: Safe Care](#) and [CRNAs: The Future of Anesthesia Care Today Research](#); also see [Important Research and Studies](#)). This descriptor fails to inspire confidence in the patients served by CRNAs.<sup>2,6,7</sup> The descriptor “mid-level” incorrectly implies that the standard of care followed by CRNAs is lower than the standard of care followed by anesthesiologists. In fact, the practice of anesthesia is a recognized nursing and medical specialty unified by the same standard of care.

Similarly, “nonphysician” and “physician extender” are negative descriptors that imply that CRNAs do not provide the same high level of care as physicians. The descriptors “allied health practitioner” and “dependent practitioner” are likewise inaccurate descriptions of the CRNA role. All of these descriptors are vague, confusing, misleading and hinder the delivery of safe, patient-centered care.

## Conclusion

Healthcare professionals should be referred to by their title to reflect their unique role. Regardless of the title or the descriptor being used, as a profession we believe it is time for the focus to be on the quality of the healthcare provided and not the title of the healthcare provider.
